

This simple graph has no legends nor tick marks, because we only specify width, height, points' coordinates, and specifications for dots and lines

This graph use the same data for points, with legends for x and y values along with tick-marks

You can see that for x-axis I provide 5 legends but only 3 tick-marks, which can be 'in' or 'out' Legends can be placed 'top' or 'bottom' for x-axis and 'left' or 'right' for y-axis.
